Fujitsu General's Infinite Comfort Pro App

The Infinite Comfort Pro app is designed to help HVAC contractors easily find Fujitsu General Halcyon mini-split and Airstage J-Series systems. This free app allows contractors and distributors to view Fujitsu General's product offering and sort by SEER, BTU, and more.

Under the Projects tab, a contractor can create a matched single zone or multi-zone system. For Halcyon Multi-zone systems, the app checks allowable combinations in real time, so you will never create a mis-matched multi-zone system again!

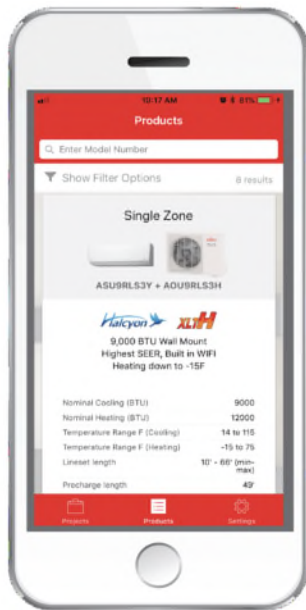

Products Tab Features:

- View Single-zone and Multi-zone product offering for Halcyon and J-Series VRF
- Filter products by SEER, BTU, etc.
- View product details

Projects Tab Features:

- Create and save systems to jobs
- Select Single-zone and Multi-zone systems based on your inputs
- View system details

- Email system details to yourself
- Built-in lineset length checker
